# Revolutionary!

At last, the perfect grip! Flexytool® prevents the rounding of nuts and bolts caused by badly fitting spanners. Flexytool® has the perfect fit thanks to its ability to encircle bolts precisely.

Flexytool is the optimum tool for all mechanic jobs. With its ability to encircle bolts tightly, Flexytool gives the best possible grip on nuts and bolts even if they are damaged or rusted. Flexytool can also be fitted around pipes which invariably makes the job in hand easier. Thanks to its unique gripping ability, the same Flexytool can be used on both inch and millimetre standard measurements.

Certain sizes/models can also be used with the external Torx system. Flexytool is a Swedish product of the very highest quality made of top quality Swedish steel. This is 'Made in Sweden' at its very best!
